

Prescription Safety Glasses

C R Surfacing Scope Prescription Safety Glasses

C R Surfacing laboratories have recently partnered with Scope Optics to deliver what we regard as a “game changer” for prescription safety eyewear. This innovative partnership combines the the expertise of two Australian owned and operated companies. CR surfacing providing higher quality lenses with faster turn around time and Scope Optics providing trendy and functional prescription ready safety eyewear. This also enables our practice to provide our patients with the same design of spectacle lenses as we provided into patients there general use glasses which minimised adaption problems and remakes.

The safety glasses are made up of two components that consist of a prescription clip in shield and the safety frame. The idea of this being

that the shield can be easily interchanged if broken or damaged. It is also possible have a tinted shield (sunglass) and a clear shield that can be interchanged depending on the workplace conditions. No other provider of safety glasses has provided this level of flexibility as previously damage to safety glasses would necessitate the purchase of an entire new pair of safety glasses at the full cost.
