Capability

Eyecare Eyewear is a locally owned and operated optometry practice established in 2006. We are strategically located within the retail hubs of both Dalby and Chinchilla to provide the communities of the Surat Basin with a convenient, professional optometry and optical dispensing service. We were recently awarded the small business of the year at the 2013 Dalby Chamber of Commerce & Industry business excellence awards.

In addition to providing general optometry services, our independence has been a key factor in enabling us to pursue niche optometry markets important to our region. These include:

- Occupational optometry services including dispensing of prescription safety glasses.
- Ocular disease diagnosis and therapeutic management
- Behavioural optometry services including children's vision testing and vision therapy.
- Specialty contact lens fitting including orthokeratology.

Our goal is to be the provider of choice for prescription safety glasses and optometry services to the local mining, energy, construction and fabrication industries. Our slogan "Professional Eyecare and Innovation in Eyewear" summarises our approach to business. Our optometry team combines years of experience with access to modern optometry equipment to provide a service that is highly efficient and professional. Our dispensing team enjoy access to the latest frames and lenses which ensures that your employee is offered a well fitted, trendy and safe product.

Prescription Safety Glasses

All three of our suppliers are licensed by SAI Global, ensuring that all products are manufactured to the required safety standards (AS/NZs 1337). Both practice locations display a minimum of 30 best selling models with access to over 90 frames. Lens designs are selected base on employee requirements and include: single vision, progressives, bifocals, transitions, polarised tint and multicoating. Orders come with certification of compliance and are typically delivered within 15 working days of ordering.

Emergency Eyecare & Vocational Optometry Services

Our optometry team is capable of delivering accurate, convenient and timely emergency eyecare for: ocular trauma & foreign body removal, welding flash and eye infections. While we are proficient in conducting out-of-office consulting and vision screenings, it is the access to three fully equipped consultation rooms and extensive computerised testing equipment that provides us with a distinct advantage over our competitors.

Eyecare Eyewear
